AI Healthcare Decision Support Report

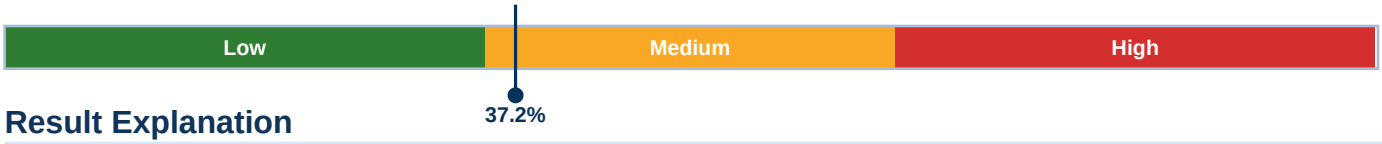
Generated March 07, 2026 16:56:40 | Confidential Clinical Analytics

Score: 37.2% (Low)

Patient Snapshot

AGE	BLOOD PRESSURE	CHOLESTEROL
40	121 mmHg	163 mg/dL

Global Risk Position



Result Explanation

Health score is 37.2% (Low risk). Your indicators are currently in a lower-risk zone, but prevention remains important. Primary risk drivers identified by the models: Blood Pressure (35.3 impact), Cholesterol (33.1 impact), Age (31.6 impact).

Confidence Model agreement is consistent for this estimate.

Monitoring and Alerts

Drift: False | High disagreement: False | Avg probability: 0.372

No active alert rules were triggered for this case.

Model Evidence and Preventive Action Plan

Model outputs, feature contributions, precautions, and recommendations

Score: 37.2% (Low)

Model Prediction Cards

LOW **37.2%**

Diabetes Model

Version: 1.0.0
Weight: 0.3
AUC 0.0 F1 0.0

Top Feature Drivers

Blood Pressure	35.3%
Cholesterol	33.1%
Age	31.6%

Precautions

- [Low] Maintain Current Progress: Continue preventive habits and repeat health screening at regular intervals.
- [Medium] Sleep and Stress Hygiene: Aim for 7-8 hours of sleep, daily hydration, and stress control practices such as walking or breathing exercises.

Recommendations

- Maintain healthy nutrition, sleep quality, and hydration.
- Continue preventive exercise and stress-management routines.
- Follow annual wellness and preventive screening visits.
